- Ukrainian (native)
- English (B2)
- Russian (native)

SUMMARY

Greetings, my name is Danylo and I'm currently a developer with **quite over 5 years of experience** within the industry as an IT specialist. Most of my career has been involved in many projects but with tailored solutions for different clients from large logistics companies to just ordinary folks with great business ideas. I have great working experience in React (Next.js) and Vue (Nuxt.js) by building high-performance web applications. I believe strongly in making a positive impact through my work, and have consistently found that end-users are overjoyed with the results. I am a people person and all about leading the way in technical innovation.

WORK EXPERIENCE

Frontend Developer at Dteam Inc.
November 2022 - Now

I work as a senior front-end developer and play a key role in the development and maintenance of various web applications. Here is a list of some applications and a short description of them:

🚀 Pet sitting application. A lot of work was done to integrate multiple user roles, optimize the application for a large number of users, work with maps (various interactive features).
🔧 React 18, Next.js 14 (app router), React Hook Form, Tanstack Query (with streaming), React Leaflet, Next Intl (i18n), RadixUI, Tailwind, SCSS modules.

🚀 An application to simplify the hiring of employees, as well as the search for employers in the construction industry in the US market. Titanic work was done on working with forms (implementing custom conditions and validation library) and input fields to achieve business goals and simplify work for end users.
🔧 Vue 3, Nuxt.js (3), i18n, Vuelidate, VueMapbox, Vuetify, CropperJS, Lodash, Stylus, SCSS modules.

🚀 A big data application for oceanography. In addition to basic things (such as authorization, data display in the form of tables, separation of the interface for different user roles), a lot of work was done with the integration of a closed service (webvowl) via iframe and subsequent communication via postMessage api, as well as work with maps (native google maps api).
🔧 React 18, Next.js (app router), Google Maps, Tanstack Query, Antd, Framer Motion, Next Intl (i18n), Zustand, React Hook Form, SCSS modules, dayjs.

🚀 An application in the AR area. The idea is to transfer advertising in different formats (business card, billboard, flyer) to AR. All the user has to do is point his phone at the QR code. Then we catch anchor points and build different UI around the QR code, which the client creates in his personal cabinet through the constructor. A lot of work went into creating the AR scene builder. We used konva.js as a canvas framework. Also used Chart.js for some internal charts.
🔧 Vue 3, Nuxt.js (3), Vuelidate, i18n, WebSocket, Quasar, GSAP, Chart.js, SCSS modules, dayjs.

Frontend Developer at Yaranding Inc.

September 2019 - November 2022

I joined the team as a trainee for a React developer position without any commercial development experience. Over three years I progressed to become a strong mid-level developer, Taking on additional responsibilities including code reviewing and interviewing. I worked with a variety of people, including international teams, on various projects. The company provided outsource/outstaff services. There were projects in various areas, including international delivery of goods, online shops, football portal and a service to simplify location management on maps and social networks. Here is a list of some applications and a short description of them:

🚀 SaaS platform for managing business data, reviews, and social media at scale via integrations with Google Maps, Facebook, and other APIs.
🔧 React 17, i18n, d3.js, Google Maps, WebSocket, Reactstrap, Redux, CSS, Postcss.

🚀Leading Estonian e-commerce platform offering over 3,700 certified organic and Fair Trade products, including food, beverages, and eco-friendly household items. The platform emphasizes sustainable practices, utilizing recycled packaging materials and providing nationwide delivery.
🔧Vue 2, Nuxt.js (2), i18n, Vuex, Vuelidate, Bootstrap, Scoped SCSS styles.

🚀 Football news portal delivering real-time updates, match results, team standings, and analytical articles covering major European leagues and international tournaments.
🔧Vue 2, Custom SSR, Sentry, Bootstrap, Vuex, Scoped SCSS.
